

Full-Body A

Tuesday · Chest & Back Emphasis · Life Time Battery Park · ~45–60 min

Before you start — warm-up (5–10 min): 5 min light cardio (brisk walk, bike, or rower, easy pace, just enough to break a light sweat) → arm circles and band pull-aparts, 15–20 reps each → one light warm-up set of exercise #1 (empty bar/light plates, 12–15 easy reps) before loading real weight. Don't skip straight from the locker room into a working set.

Several moves here have you lying, seated, or bending forward (presses, rows, RDL): move between positions calmly rather than popping up fast — Nifedipine can cause dizziness on standing. Hydrate before, during, and after.

Today's Full-Body Focus

Every full-body session hits a push, a pull, and a leg pattern, then finishes with shoulder isolation, a pec/back accessory move, and core. Today's push and pull lean toward pecs and back width; legs get the quad-dominant leg press. Lateral raises are in the isolation slot twice a week — it's the single biggest lever for the “3D” shoulder look, so it shows up here and again Saturday.

“3D” shoulders means all three deltoid heads: **anterior** (front, hit by pressing), **lateral** (side, the width, built by lateral raises), and **posterior** (rear, the head people skip, built by rear delt fly). Anatomical reference: Wikipedia, “Deltoid muscle.”

The Session

Compounds first while you're fresh, isolation after, core to finish. 3 sets × 8–12 reps on presses/pulls/legs, 12–15 on isolation work — last 2 reps of each set should feel hard.

1. Incline Chest Press

PUSH · UPPER PEC · 3 × 8–12

Machine or barbell. This is the fullness up top — the part that shows above a shirt collar. Press up and slightly back over the face, don't flare elbows past 45°.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

2. Lat Pulldown

PULL · BACK WIDTH · 3 × 8–12

Wide-grip, pull to upper chest, elbows drive down and back. This is the width lever for the v-taper look — lead with the elbows, not the hands, and avoid leaning back to cheat the weight down.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

3. Leg Press

LEG · QUAD-DOMINANT · 3 × 8–12

Feet shoulder-width on the platform. Lower until knees hit about 90°, don't let the lower back round off the pad, press through the whole foot — not just the toes.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

4. Lateral Raises

SHOULDER ISOLATION · SIDE DELT · 3–4 × 12–15

Raise to shoulder height, lead with the elbows not the hands, no swinging momentum from the hips. The single biggest lever for the “3D” look.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

5. Dumbbell Flat Bench Fly

PEC ACCESSORY · MID / INNER PEC · 3 × 12–15

Slight bend in the elbows throughout, feel the stretch at the bottom, squeeze at the top — don't press the weight, arc it.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

FOREARM PLANK

Core — keep the shoulder-hip-ankle line straight

6. Forearm Plank

CORE · 3 sets, build past 50s

Straight line from shoulder to hip to ankle — no sagging hips, no piked butt.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

Log the actual weights above, then transfer them into `workouts/logs/2026-08.md` so next week's session has a real baseline to progress from.
