

Full-Body B

Thursday · Shoulders & Posterior Chain Emphasis · Life Time Battery Park · ~45–60 min

Before you start — warm-up (5–10 min): 5 min light cardio (brisk walk, bike, or rower, easy pace, just enough to break a light sweat) → arm circles and band pull-aparts, 15–20 reps each → one light warm-up set of exercise #1 (empty bar/light plates, 12–15 easy reps) before loading real weight. Don't skip straight from the locker room into a working set.

Several moves here have you lying, seated, or bending forward (presses, rows, RDL): move between positions calmly rather than popping up fast — Nifedipine can cause dizziness on standing. Hydrate before, during, and after.

Today's Full-Body Focus

Today's push is overhead instead of flat/incline — it hits front and side delt directly. The pull moves to horizontal rowing for back thickness (versus Tuesday's width-focused pulldown), and the leg pattern flips to hamstring/glute-dominant with the Romanian deadlift. Isolation work targets the rear delt — the head that finishes the “3D” shoulder look from behind and the one most people skip.

“3D” shoulders means all three deltoid heads: **anterior** (front, hit by pressing), **lateral** (side, the width, built by lateral raises), and **posterior** (rear, the head people skip, built by rear delt fly). Anatomical reference: Wikipedia, “Deltoid muscle.”

The Session

Compounds first while you're fresh, isolation after, core to finish. 3 sets × 8–12 reps on presses/pulls/legs, 12–15 on isolation work — last 2 reps of each set should feel hard.

1. Seated Shoulder Press

PUSH · FRONT + SIDE DELT · 3 × 8–12

Press straight overhead, ribs down (don't arch the lower back to finish the rep). No baseline weight yet — start conservative, log what you land on below.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

2. Seated Cable Row

PULL · BACK THICKNESS · 3 × 8–12

Sit tall, drive elbows back past the ribs, squeeze the shoulder blades together at the finish. Don't lean back and use momentum — the pull should come from the back, not the torso rocking.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

3. Romanian Deadlift

LEG · HAMSTRING / GLUTE · 3 × 8–12

Soft knee bend, hinge at the hips and push them back, bar stays close to the legs. Stop when you feel a stretch in the hamstrings (roughly mid-shin) — this isn't a floor-touching deadlift. Start light; form first.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

4. Rear Delt Fly

SHOULDER ISOLATION · REAR DELT · 3 × 12–15

Reverse pec-deck or cable if available, otherwise bent-over dumbbell fly as shown. The move that actually finishes the shoulder look from behind, not just from the mirror.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

5. Flat / Machine Chest Press

PEC ACCESSORY · MID PEC · 3 × 8–12

Last time: 60 / 70 / 80 lbs. Push for 70 / 80 / 90 if the top set still leaves 2 reps in the tank with good form.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

FOREARM PLANK

Core — keep the shoulder-hip-ankle line straight

6. Forearm Plank

CORE · 3 sets, build past 50s

Straight line from shoulder to hip to ankle — no sagging hips, no piked butt.

Set 1: ____ Set 2: ____ Set 3: ____ (weight)

Log the actual weights above, then transfer them into `workouts/logs/2026-08.md` so next week's session has a real baseline to progress from.
